# Regulatory Standards

**Notes:**

1. The yellow line does not represent an "expected operations." It represents the pumping operations under the then existing regulatory standard for that day, week, or month of the year. Pumping reductions below that line to protect fish would be repaid with pumping increases above the line at a later date.

2. Increased pumping as a payback may occur either as increases above 6,680 cfs for the SWP and 4,600 for the CVP or as increases above pumping constraints that would otherwise limit pumping such as X2, VAMP or other regulatory restraint.
