

Recommended Refinements to the Draft BDCP Conservation Measures Based on Draft Terrestrial Resources Effects Analysis Results

- Add conservation measure implementation detail for specific species in the Suisun Marsh restoration component of Conservation Measure 10, *Restore Tidal Habitat* for:
 - 7 wildlife species
 - 2 plant species
- Add detail to avoidance and minimization measures for wildlife and plant species
- Inland dune scrub conservation measure (new natural community)
 - Prepare conservation measures for 3 species
 - Manage and enhance existing habitat
 - Possibly restoration of inland dune scrub
- Continue to refine natural community templates for grassland and riparian goals and objectives and conservation measures
- Based on discussion of grassland and riparian templates, review and refine as needed other natural community level goals and objectives
- Provide for and document review of conservation strategy by species experts, and determine how to address gaps if any are identified
- Review which species may need individual objectives if not covered by community-level objectives
- Continue to work on waterfowl and shorebird effects analysis and conservation measure, and get input from Central Valley Joint Venture Program and other bird experts
- Consider whether any changes in the effects analysis or conservation strategy are needed as a result of all the above
