The BDCP is a long-term strategy to secure California’s water supplies and improve the ecosystem of the Sacramento-San Joaquin River Delta.

The BDCP Co-Equal Goals

**WATER SUPPLY RELIABILITY**

- **3 INTAKES**
- **2 GRAVITY FLOW TUNNELS**
- **30 MILES IN LENGTH**
- **9,000 CFS* CAPACITY**
  *Cubic Feet per Second

**ECOSYSTEM RESTORATION**

- **150,000 ACRES OF RESTORED AND PROTECTED HABITAT**
- **56 PROTECTED SPECIES**
- **IMPROVED FLOW CONDITIONS TO BENEFIT FISH IN THE DELTA**

**SECURING WATER SUPPLIES**

4.7-5.6 MILLION ACRE-FEET ON AVERAGE ANNUALLY

(An acre-foot is roughly as much water as two California households use, indoors and outdoors, in a year)

**CREATING & PROTECTING JOBS**

1.1 MILLION FULL-TIME EQUIVALENT JOBS CREATED AND SAVED FOR CALIFORNIA

(Based on a year by year estimate)

**BOOSTING THE ECONOMY**

$84 BILLION INCREASE IN STATE ECONOMIC PRODUCTIVITY

The BDCP Would Benefit Millions of Californians

The BDCP is one part of California’s overall water portfolio. It aims to protect our unique Delta ecosystem and secure water supplies for a vast part of the California economy.

**The BDCP is Important for California**

Fast Facts
The BDCP is Guided by the Best Available Science

- **Adaptive Management Program**
  - to implement and monitor BDCP biological goals and objectives

- **Water Operations**
  - by the Department of Water Resources and the U.S. Bureau of Reclamation

- **Oversight**
  - by state and federal fish and wildlife agencies

The BDCP Would Benefit the Delta Ecosystem

**Delta Restoration**

BDCP would contribute to the conservation of 56 species of fish, plants and wildlife in the Delta.

- **45** Species of plants and wildlife conserved through protection and enhancements in the quantity and quality of habitat in the Delta.
- **52%** Increase in protected land in the Delta.
- **11** Fish species benefit, from an increase in the amount and quality of habitat, food sources, and ecological function of Delta flows. Species include Chinook salmon and delta smelt.
- **10** Other stressor reduction measures would reduce adverse effects, such as invasive species, predation, and contaminants, to improve the ecological function of the Delta.
