

Draft Bay Delta Conservation Plan

Errata Sheet in Progress

Updated: 03/21/2014

Chapter/ Appendix	Page	Line	Table/Figure	Correction
5	5C.0-5	3-4	“Longfin Smelt Stock Recruitment/ Flow Analysis”	Analysis was inadvertently referenced in the BDCP and was not used for the final report. Kimmerer analysis on Relative-Abundance Regressions, Ch.5 Appendix 5C Section 5C.5 was used for longfin smelt.
8	8-74	N/A	Table 8-41	Numbers in table inadvertently retained from previous version. Correct numbers can be found in Appendix 8.A.
9	9-203	31- 32		The sentence “ Take Alternative B would result in greater annual outflow (15.92 MAF) than existing conditions (15.53 MAF) on average. ” incorrectly draws a comparison to existing conditions when the comparison described in the paragraph is to the BDCP Proposed Action. The sentence should read “ Take Alternative B would result in less average annual outflow than <u>the BDCP Proposed Action (averaging about 0.22 MAF less).</u> ”
